Projects

Swiggy Clone — Click here

- Description: This project is a Swiggy clone that allows users to explore restaurants based on their location. Built with React.js and Tailwind CSS, it integrates Firebase Authentication, enabling users to sign up with email and securely access personalized features.

IPL Dashboard — Click here

- Description: This project provides a real-time dashboard for IPL matches and players using API data. Developed using React.js and Tailwind CSS, it offers an interactive and dynamic interface to view match statistics and player details.

Portfolio Website — Click here

- Description: This portfolio showcases my skills and projects. Developed using React.js and Tailwind CSS, it features a modern and interactive design to effectively display my work and highlight my abilities.

Weather App — Click here

- Description: This application provides weather information by entering the city name. Developed using HTML, CSS, and JavaScript, it fetches and displays the current weather data for any city using a weather API.

CSS Gradient Generator — Click here

- Description: Developed using HTML, CSS, and JavaScript, this project enables users to generate gradient colors for their websites or applications. It provides a user-friendly interface to customize and preview gradient colors.

Quiz App — Click here

- Description: This application fetches quiz questions from an API and presents them as multiple-choice questions. Users can select the correct answer from the provided options. Developed using HTML, Tailwind CSS, and JavaScript, it offers an interactive and engaging user experience.
