Tools
Git, GitHub, VS Code

Projects

AI Resume Builder Live Link

- This project is an AI-powered resume builder that allows users to create professional resumes with ease. The frontend is developed using **React.js**, **Tailwind CSS**, and **Shadcn UI**, while Firebase is used for backend support and authentication via Clerk.

Swiggy Clone Live Link

- This project is a Swiggy clone that allows users to explore restaurants based on their location. Built with **React.js** and **Tailwind CSS**, it integrates **Firebase Authentication**, enabling users to sign up with email and securely access personalized features.

IPL Dashboard Live Link

- This project provides a real-time dashboard for IPL matches and players using API data. Developed using **React.js** and **Tailwind CSS**, it offers an interactive and dynamic interface to view match statistics and player details.

Yummi Food Live Link

- The Yummi Food project is a restaurant-based web application where users can browse through a variety of dishes and menus. Developed using **React.js** and **Tailwind CSS**, it offers a seamless and responsive interface. The application is designed to provide a dynamic user experience with smooth navigation, and it allows users to explore various food categories and select their favorite dishes.

Portfolio Website Live Link

- This portfolio showcases my skills and projects. Developed using **React.js** and **Tailwind CSS**, it features a modern and interactive design to effectively display my work and highlight my abilities.

Weather App Live Link

- This application provides weather information by entering the city name. Developed using **HTML**, **CSS**, and **JavaScript**, it fetches and displays the current weather data for any city using a weather API.

CSS Gradient Generator Live Link

- Developed using **HTML**, **CSS**, and **JavaScript**, this project enables users to generate gradient colors for their websites or applications. It provides a user-friendly interface to customize and preview gradient colors.
